SILVERMINE

Silvermine Stone isn't just another manufacturer of man-made stone products. The truth is we created the market.

Like all great stories, Silvermine Stone began as a drawing on a cocktail napkin on a rainy Wisconsin day in 2007, when a stone mason was frustrated that the wet weather was keeping him form his work.

Little did he know, his drawing would revolutionize the entire stone industry.

Motared stone veneers

- Technically complex - layout & color blending

- Extra Labor - multiple steps required to protect the wall cavity

- Weather prohibitive

- High risk for moisture - you don't know there is a problem until it is too late

Recognizing Trends

INNOVATION

Mouse-traps keep getting better and product innovation is here to stay, consider:
- Man-made Materials
- Woodgrain Aesthetics
- Building Science

DE-SKILLED LABOR

Skilled trades are getting harder to find. Craftsmen & Carpenters are becoming Laborer's & Installers

BLENDED CLADDING

Mixed materials are being introduced to step up curb appeal. Gables with Shakes, Wainscotings of Stone

MOISTURE MANAGEMENT

The science of building a house keeps pointing to protecting the structure. Felt-paper has evolved to House Wraps which evolved to Drainable Wraps

Making Silvermine Easy to Sell

REAL STONE AESTHETIC

EASY INSTALLATION

PROTECTS FROM WATER DAMAGE

Does it look like real stone?

Are there repetitive patterns?

How do the corners look?

Is it simple to install?

Do you have to lay out the stones like a mason?

Is the system easy to figure out?

Is the house protected from moisture?

Does the system allow water to get behind your cladding?

Are the fasteners protected from drainage?

WHY SILVERMINE?

"Simplest Stone in the World to Install!"

- Mortarless (screw-on application)
- No mason needed
- Can be installed in any weather
- Precision cut panels
- 40-50% lower cost to install
- 50+ unique profiles
- Increases the value of your home or business
- Durable and maintenance free

Belterra® - Flats, Corners, & Pillars

Evening Gray

Dover Cliff

Marin Fog

Dakota Sunset

**Monument Valley**

FLAT PANELS

6" tall x 24" long = 1 sq ft

SILLS

2 3/4" tall x 3 7/8" deep x 36" long

Available in: Sand, Slate & Brownstone

CORNERS | 2 PIECES

Long Side - 6" tall x 24"

Short Side - 6" tall x 18"

2 Corner System
6" tall x 24" or 18" long = 1.75 sq ft

PILLARS

The Silvermine pillars system offers a fast, easy and uniform option for creating pillars, columns and post surrounds.
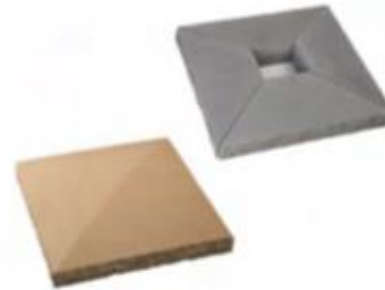

Available as Stones only or in kits.

18" x 18" Pillars
24" x 24" Pillars
36" or 48" Tall Kits

18" x 18" Mailbox Kits
48" & 54" Tall Kits

CAPS

- Peaked (22")
- Flat (22" & 28")
- Split Quad Cap (22")

Available in: Sand, Grey & Brownstone

OUTLETS & LIGHTBOXES

Available in:
- Grey (shown)
- Brownstone (shown)
- Sand

Product Name	Photo	Size	Description
Flats		6"x24"	**8 sf (8 pcs) per box - 128 sf per pallet - 16 boxes per pallet** **(Average Weight: Piece - 14#, Box - 112#, Pallet - 1792#)** 54 Masters to avoid repeating patterns Patented Flashing and Fastening System Available in 5 colors
Corners		6"x24" & 6"x18"	**2 lin vertical ft (4 sets - 8 pcs) per box - 32 lin vertical ft per pallet** **(Average Weight: Set - 23#, Box - 93#, Pallet - 1,532#)** Each box will have 4 of each size allowing for stagering For use as inside or outside corners Patented Flashing and Fastening System Available in 5 colors
18" Pillar Stone		6"x18"	**1 Box (4 ft - 8 pc) covers 4 sides 1' H - 64 ft/pallet** **(Average Weight: Piece - 9#, Box - 79#, Pallet - 1242#)** **Fits frame size - 14-1/4" x 14-1/4"** Fastening System Only; no flashing Available in 5 colors
24" Pillar Stone		6"x24"	**1 Box (4 ft - 8 pc) covers 4 sides 1' H - 64 ft/pallet** **(Average Weight: Piece - 11#, Box - 88#, Pallet - 1408#)** **Fits frame size - 20-1/4" x 20-1/4"** Fastening System Only; no flashing Available in 5 colors

Silvermine® Six Easy Steps

1

Apply a vapor barrier over the wall

No water resistant barrier (WRB) required.

2

Mark the studs vertically

Where possible, one fastener per piece of stone should go into a stud.

Tips

Cutting the Stone

Cutting and shaping the stone to conform to the shape and needs of your project will likely be necessary. For easy cuts we recommend using a circular saw with a diamond blade.

Using a 4-inch angle grinder with a diamond blade will make small cuts and creating notches for hose spigots, outlets and light boxes much simpler. **It's efficient, easy to handle and operate, and great for the tight-fitting corners you want for a professional finish.**

3. A strip of flashing

at least 8-inches tall should be fitted to the bottom of the wall. This can be made from aluminum, galvanized steel or rubberized materials.

4. The first course of stone

Once the bottom strip of flashing is in place, you will begin the first course of stone. You can use nails or screws to install Silvermine® stone products. Whichever fasteners you choose, they must penetrate into the studs at least one inch. See Silvermine's website for list of approved fasteners.

Our Stone Siding products are **game-changing** because of the **"shingle effect" created by the aluminum flashing** distinctive to Silvermine® products. The flashing of each stone layer overlaps vertically by 2-inches, which **provides protection** from mold, mildew and the effects of freezing and thawing.

Tips

Working with metal flashing

Cutting the flashing can be done with ease using tin snips or scored with a utility blade, then bent and snapped off.

Flashing is a very important part of starting the installation process. You will need to start installing the stone from the bottom of the wall and go up from there.

4a

The most important part of the entire installation process is getting this first course of stone perfectly level. It will act as a foundation for the rest of the wall and makes for a smoother and more secure process.

Note: If you are installing above a poured slab you should ensure that the bottom of the first course of stone is half an inch above the slab's surface.

4b

It is not necessary to apply an adhesive to the back of this first course of stone as our products are designed to allow for the natural movement from freezing, thawing and the settling of the structure. If you want to apply adhesive, it must be placed only in the center of each piece of stone.

5

Installing the next layers

it is important to stagger the stone siding, keeping at least a 3- to 4-inch offset. You shouldn't have any vertical seams running up the wall. Stones come as 2-foot by 6-inch pieces so can be cut into several sections of varying widths to start and adjust the stagger. **Silvermine® provides an industry leading number of stone layouts to minimize repeating patterns.**

6

Working upwards and with the edges

You should make sure to keep the factory edge to the outside and the cut edge to the inside.
